

HMT is pleased to announce a new multipurpose quantitative platform targeting 353 metabolites including sugar phosphates, amino acids, neurotransmitters, and fatty acids. These metabolites were chosen based on cellular function and plasma and tissue availability.

Broad Coverage by CE-TOFMS

- 353 Targeted Metabolites
e.g. sugar phosphates, amino acids, nucleic acids, organic acids, vitamins, short/medium chain fatty acids, dipeptides, etc.

Absolute Quantitation

- Metabolite concentrations provided

Customizable

- Various add-ons available

Multi-Purpose

- No limitation of sample types
